An Industrial Gas Detector is an instrument used in industrial areas to continuously monitor and detect hazardous gases and vapors, and to generate audible and visual alarms to alert personnel to the existence of these hazards. These gases and vapors could be combustible, such as a hydrocarbon gas mixture in air, or a combustible solvent vapor, which can occur from a spill or leak of a solvent where vapors can form with air to create a combustible mixture of fuel and oxygen. The gas or vapor can also be a toxic material, such as Carbon Dioxide, Hydrogen Sulfide, Chlorine or Ammonia. Oxygen levels can also be monitored by an Industrial Gas Detector in areas where an inert gas could pose a potential risk to displacing the oxygen in ambient air where personnel are present.
