Industrial Gases refers to gases which are produced in relatively large quantities by industrial gases companies for use in a variety of industrial manufacturing processes. These include air separation gases, such as oxygen, nitrogen and argon, and carbon dioxide, hydrogen and helium. They are produced and supplied in both gas and liquid form. They are transported to customers in cylinders, as bulk liquid, or as pipeline gases. The properties of industrial gas are utilized to produce specialty products, protect and maintain product quality, and lower operating costs in steelmaking, metals manufacturing and fabrication, petroleum refining, chemicals and pharmaceuticals manufacture, production of electronic equipment and components, the rubber and plastics industries, food and beverage processing, glass manufacture, healthcare, pulp and paper and environmental protection operations.
