The global Industrial Grade 1,6-Hexanediamine market size is predicted to grow from US\$ 8815 million in 2025 to US\$ 12440 million in 2032; it is expected to grow at a CAGR of 5.1% from 2026 to 2032.

Industrial Grade 1,6-Hexanediamine (HMD) is an organic compound with the chemical formula $C_6H_{16}N_2$. It is a colorless, hygroscopic, and strongly alkaline liquid with a distinct amine odor. HMD is a crucial industrial chemical primarily used as a precursor in the production of polyamides (nylon), particularly Nylon 6,6. The compound is synthesized through the hydrogenation of adiponitrile and is known for its high reactivity due to the presence of two primary amine groups. These properties make it an essential intermediate in polymer manufacturing, coatings, adhesives, and other specialty chemicals.

The versatility of HMD extends beyond polymer applications, as it is also used in the production of epoxy curing agents, lubricants, and water treatment chemicals. Its role in synthesizing polyurethane elastomers, resins, and polyureas further enhances its industrial importance. Due to its strong alkaline nature, HMD is corrosive and requires proper handling to ensure safety in industrial environments.

The global Industrial Grade 1,6-Hexanediamine market has witnessed significant growth in recent years, primarily driven by the expanding automotive, textile, and plastics industries. The increasing demand for high-performance nylon-based materials in these sectors has fueled the need for HMD. The automotive industry, in particular, relies on Nylon 6,6 for lightweight components, fuel-efficient designs, and durable parts that can withstand high temperatures and mechanical stress.

Additionally, the rising demand for industrial coatings, adhesives, and sealants has contributed to the steady market expansion of HMD. With the growing emphasis on sustainable and bio-based polyamides, research and development efforts are focused on alternative production methods that reduce environmental impact while maintaining the high performance of HMD-based materials.

Industrial Grade 1,6-Hexanediamine (HMD) is an indispensable chemical in the global industrial landscape, primarily due to its role in polymer production, adhesives, and coatings. The market for HMD is experiencing robust growth, fueled by demand from automotive, textiles, electronics, and water treatment industries. However, challenges such as price volatility and environmental concerns necessitate innovation and sustainability-focused strategies. With continued advancements in material science and chemical engineering, HMD will remain a critical component of industrial and consumer applications for years to come.

Global key manufacturers of Industrial Grade 1,6-Hexanediamine (HMD) include Asecend, BASF, Invista, Shenma Group, Toray, Anshan Guorui Chemical and Domo Chemicals. The largest market is North America, with over 40% of global market share, followed by Asia-Pacific, with about 30% market share. In terms of application, nylon resin is the dominant product, accounting for about 90% of total market share.
