The global Industrial Grade Anhydrous Calcium Chloride market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Industrial Grade Anhydrous Calcium Chloride is a white or colorless crystalline solid that is highly soluble in water. Anhydrous Calcium Chloride is produced by the dehydration of hydrated calcium chloride. It is widely used in various industrial applications, including de-icing roads and pavements, oil and gas exploration, refrigeration, cement production, and wastewater treatment. Anhydrous Calcium Chloride is also used in the food industry as a preservative, and in the pharmaceutical industry as a source of calcium ions. It is highly hygroscopic, meaning it absorbs water from the air, and can generate heat when dissolved in water.

The global market for industrial-grade anhydrous calcium chloride is a significant segment within the chemical and manufacturing industries. Anhydrous calcium chloride is a versatile chemical compound widely used for various industrial applications, including deicing and snow removal, desiccation, dust control, concrete curing, oil and gas drilling, and more. Its hygroscopic and exothermic properties make it valuable in multiple industrial processes. The United States and Canada have a significant demand for industrial-grade anhydrous calcium chloride, particularly for deicing and snow removal purposes in winter months. European countries also use anhydrous calcium chloride for deicing and road maintenance, as well as in industrial applications such as desiccation and dust control. Countries like China, India, and Japan have a growing market for industrial-grade anhydrous calcium chloride due to their expanding construction, agriculture, and manufacturing sectors. The industrial-grade anhydrous calcium chloride market is expected to witness steady growth due to its diverse range of

applications across various industries. As urbanization and industrialization continue, the demand for deicing agents, dust suppressants, and moisture control solutions is likely to persist.
