The global Industrial Grade Biological Wastewater Treatment System market size is predicted to grow from US$ 738 million in 2025 to US$ 1234 million in 2032; it is expected to grow at a CAGR of 7.8% from 2026 to 2032.

Industrial-grade biological wastewater treatment systems are complete sets of equipment and engineering solutions for the biodegradation, solid-liquid separation, and advanced treatment of organic and biological pollutants generated from industrial production. Common technical routes include activated sludge processes, sequencing batch reactors (SBRs), membrane bioreactors (MBRs), moving bed biofilm reactors (MBRs), anaerobic digestion, and anaerobic-aerobic coupling. Global shipments in 2024 were estimated at approximately 14,000 units, with an average unit price of approximately US$51,000. A typical single-line annual production capacity is approximately 2,000 units. Upstream companies in the industry mainly come from stainless steel and structural component processing, membrane and packing material manufacturing, aeration and pump/valve equipment, chemical reagents and bio-enhancing agents, automation control and sensor supply, and engineering design and EPC contracting. Downstream application industries cover petrochemicals and chemicals, pharmaceuticals, biopharmaceuticals, food and beverage, paper and textiles, metal smelting, and electronics manufacturing. For industrial users requiring wastewater to meet discharge standards or for reuse, the typical gross profit margin is approximately 28%. The product cost structure is roughly as follows: materials and core components account for 45%, manufacturing and assembly for 25%, engineering design and R&D for 10%, on-site commissioning and testing for 8%, sales and management for 7%, and after-sales support and spare parts for 5%. Products are categorized by parameters and market, by treatment technology (activated sludge, sequencing batch reactor, membrane bioreactor, moving bed biofilm, anaerobic
