The global Industrial Grade Ferrous Sulfate market size is predicted to grow from US\$ 118 million in 2025 to US\$ 151 million in 2032; it is expected to grow at a CAGR of 3.7% from 2026 to 2032.

Industrial grade ferrous sulfate is a chemical compound commonly used in various industrial applications. It is produced by reacting iron with sulfuric acid and is primarily used as a reducing agent, in the preparation of iron oxide pigments, and in water treatment processes.

Water Treatment:

The use of ferrous sulfate in water treatment processes, particularly for coagulation and removal of impurities, drives demand in the industrial water treatment sector.

Pigment Production:

It is widely used in the production of iron oxide pigments, which are used in paints, coatings, and construction materials.

Increased Industrialization:

As industries such as construction, automotive, and manufacturing expand, the demand for iron oxide pigments and water treatment chemicals is expected to rise, creating opportunities for growth in the ferrous sulfate market.

Environmental Regulation Compliance:

Stricter regulations on industrial water treatment processes are pushing the adoption of ferrous sulfate in wastewater treatment facilities.

Regulatory Challenges:

Increased environmental awareness and regulations on industrial waste may limit the widespread use of some chemicals, including ferrous sulfate, in certain applications.
