The global Industrial Grade Isohexanediol market size is predicted to grow from US\$ 147 million in 2025 to US\$ 205 million in 2032; it is expected to grow at a CAGR of 4.9% from 2026 to 2032.

Industrial grade isohexanediol usually refers to a commonly used solvent based diol in the isomers of hexamethylene glycol, with a molecular formula of $C_6H_{14}O_2$. It generally appears as a colorless and transparent liquid with moderate volatility, good solubility, and strong solubility and moisturizing ability. It can be miscible with water and various organic solvents such as alcohols, ketones, esters, etc. Industrial grade indicates that its purity and impurity control meet industrial application requirements rather than food or pharmaceutical grade requirements. It is typically used as a solvent and leveling modifier for coatings and inks, solvents and stabilizing components for adhesives and resin systems, solvents and stabilizing components for metalworking fluids and cleaning agents, moisturizing and solubilizing agents for some cosmetics and daily chemical formulas, as well as carrier solvents for agrochemicals and other fine chemical formulas. In 2025, global Industrial Grade Isohexanediol production reached approximately 33.44 K MT, with an average global market price of around US\$ 4,498 per MT.

The annual production capacity of industrial grade isohexanediol is 45 K MT, with a gross profit margin of about 20%.

The upstream mainly comes from basic petrochemicals, hydrogen and catalytic material systems, with key inputs including acetone and its derived diacetone alcohol intermediates, hydrogen, hydrogenation catalysts and additives, as well as steam, electricity, cooling water and other public works. The packaging materials are mostly

barrel or tanker systems, accompanied by hazardous chemical regulations and warehousing logistics costs.

Downstream focus is on the solubilizing and leveling systems of coatings and inks, the solubilizing and viscosity adjustment of adhesives and resin formulations, the solubilizing and stabilizing components of industrial cleaning agents and metalworking fluids, as well as solubilizing and moisturizing carriers for some daily chemical and personal care formulations. In addition, it can also serve as a solvent based carrier for some agricultural and fine chemical formulations.

Raw materials are usually the largest item, accounting for about 65% to 80% of production costs, utilities and energy consumption account for about 6% to 12%, catalyst and chemical consumption account for about 1% to 4%, labor and manufacturing costs account for about 4% to 8%, depreciation and equipment maintenance account for about 5% to 10%, packaging and warehousing logistics and compliance testing account for about 5% to 12%.

United States market for Industrial Grade Isohexanediol is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
