The global Industrial Grade Multimode Fiber Laser market size is predicted to grow from US$ 1070 million in 2025 to US$ 1755 million in 2032; it is expected to grow at a CAGR of 7.5% from 2026 to 2032.

Industrial-grade multi-mode fiber laser is a high-power laser that generates laser light through a multi-mode fiber gain medium and can support laser output of multiple propagation modes at the same time. Compared with single-mode fiber lasers, it has a larger beam divergence angle and lower beam quality, but can provide higher power output and is suitable for large-scale industrial applications. This laser is widely used in processing scenarios that require high power and high speed, such as metal cutting, welding, and heat treatment. It is especially suitable for situations where beam quality requirements are not so strict but higher power is required. Due to its simple structure and low cost, industrial-grade multimode fiber lasers have significant advantages in high-efficiency processing.

United States market for Industrial Grade Multimode Fiber Laser is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Industrial Grade Multimode Fiber Laser is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Industrial Grade Multimode Fiber Laser is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
