Industrial grade octadecanamide is an important organic compound widely used in many industrial fields. It is produced by the reaction of stearic acid (octadecanoic acid) and ammonia, and appears as a white or slightly yellow powder or flaky solid with good lubricity, wear resistance and dispersibility. In plastic and rubber processing, octadecanoic acid is used as an internal and external lubricant to improve the fluidity of the material and reduce friction during the molding process, thereby improving production efficiency and extending mold life. In the coating and ink industry, octadecanoic acid is used as a leveling agent and slip agent to help prevent caking and improve coating effect and flatness.
