The global Industrial-grade Pellet 3D Printer market size is predicted to grow from US\$ 49.95 million in 2025 to US\$ 147 million in 2032; it is expected to grow at a CAGR of 17.0% from 2026 to 2032.

Industrial-grade pellet 3D printers are high-performance devices that use granular raw materials to directly perform additive manufacturing. Compared with traditional wire 3D printers, Pellet 3D printers have lower raw material costs, a wider variety, and can print large-size or high-strength parts, suitable for industrial production. It heats and melts particles and deposits them layer by layer, and is widely used in the automotive, aerospace, construction, and mold manufacturing industries to achieve efficient and sustainable manufacturing solutions.

A pellet 3D printer is an advanced 3D printer that uses thermoplastic pellets as printing materials instead of traditional filaments or resins. These printers are equipped with a screw or extruder that melts and deposits plastic pellets layer by layer to create the desired object. Pellet 3D printing is generally more cost-effective and versatile, allowing the use of a variety of materials, including recycled plastics.

From a regional perspective, China, North America, and Europe account for the vast majority of the market share. China will become the world's largest market as Shenzhen KINGS 3D starts selling FGF technology printers in 2023. The Asia-Pacific region has the largest population in the world, and with the industrialization of a large number of emerging regions such as India and Southeast Asia, it is expected to become the fastest growing region from 2024 to 2030, with a compound annual growth rate of approximately 29.59%. In 2023, the Chinese manufacturer KINGS 3D completed its production base in Zhuhai and began mass production of pellet 3D printers, becoming

the world's number one manufacturer in terms of sales. The world's top three manufacturers account for approximately 60.58% of the global market share.

Particle 3D printers are well suited for mass production, allowing for faster production speeds and larger part sizes, which is attractive to industries such as automotive, consumer goods, and aerospace. In 2023, consumer goods accounted for 30.11% of the sales market share and is expected to account for 33.06% of the market share by 2030. In 2023, automotive and aerospace accounted for 25.27% and 15.96%, respectively.
