The global Industrial Grade Soybean Oil market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Industrial grade soybean oil is usually extracted from soybeans through a mechanical or chemical process that involves high heat and chemical solvents. The resulting oil is then refined and processed further to meet the specific needs of various industries.

Industrial-grade soybean oil is a versatile and widely used commodity in various industries, including food processing, biodiesel production, manufacturing, and more. One of the significant drivers for industrial-grade soybean oil was its use in biodiesel production. As the demand for renewable and sustainable energy sources increased, soybean oil was a popular feedstock for biodiesel, contributing to market growth. Consumer preferences for clean-label products and non-genetically modified organisms (GMOs) extended to the food industry. Manufacturers sought non-GMO and clean-label soybean oil to meet these demands. The market saw a growing emphasis on sustainability and environmental responsibility. Industrial users sought soybean oil as a sustainable alternative to petroleum-based oils and fats. Consumer preferences for clean-label products and non-genetically modified organisms (GMOs) extended to the food industry.
