Abstracts

The global Industrial Grade Urea Phosphate market size is predicted to grow from US$ 85.11 million in 2025 to US$ 117 million in 2032; it is expected to grow at a CAGR of 4.8% from 2026 to 2032.

Urea phosphate, also known as urea phosphate or urea phosphate, is a compound produced by the combination of phosphoric acid (H?PO?) and urea (NH?CONH?), and its molecular formula is (NH?)?CO·H?PO?. The structure of urea phosphate contains a combination of an urea group (NH?CONH?) and a phosphate group (H?PO?), which has good water solubility and chemical stability. In 2024, global Industrial Grade Urea Phosphate production reached approximately 84.17 K MT, with an average global market price of around US$ 986 per MT.The production capacity of a single production line is about 10,000 tons. Gross profit margin is about 20%.

Upstream industry: Upstream raw material costs account for about 80% of the total cost.

1 Basic raw materials: Phosphate ore: the most basic source. The price and supply stability of phosphate ores are greatly affected by national policies, environmental protection requirements and mining quotas. Sulfur/sulfuric acid: the key raw material for the production of wet phosphoric acid. The price of imported sulfur has an important impact on cost. Urea: From the fertilizer industry, its price is obviously cyclical. 2 Direct raw materials: phosphoric acid.

Flame retardant sales account for 60%, demand has grown rapidly and the market potential is the greatest. Cleaner sales account for 15%. Rust remover is about 13%. Preservative sales account for less than 5%.
