A hand tool is any tool that is not a power tool – that is, one powered by hand (manual labour) rather than by an engine. Some examples of hand tools are garden forks, secateurs, rakes, hammers, spanners, pliers, screwdrivers and chisels. Hand tools are generally less dangerous than power tools.

The hand tools market is driven by factors such as increasing construction and renovation activities, growth in automotive repair and maintenance, and the rising demand for DIY (do-it-yourself) projects among consumers. Hand tools are essential for a wide range of applications across various industries, making them a crucial component of many professional and personal toolkits. The construction industry's expansion, coupled with infrastructure development projects, contributes to the demand for hand tools like hammers, wrenches, and screwdrivers. Additionally, the surge in home improvement and repair projects, along with the trend of hobbyist DIY enthusiasts, is boosting the market. However, challenges in the hand tools market include competition from power tools and concerns about the quality and durability of low-cost hand tools. Manufacturers are focusing on innovation, ergonomic designs, and the incorporation of advanced materials to overcome these challenges and cater to evolving customer needs.
