The Hardening Machinery are device used for hardening that is a type of surface hardening in which a metal part is induction-heated and then quenched. The quenched metal undergoes a martensitic transformation, increasing the hardness and brittleness of the part. Hardening is used to selectively harden areas of a part or assembly without affecting the properties of the part as a whole.

The global Industrial Hardening Machines market size is projected to grow from US\$ 311 million in 2024 to US\$ 349 million in 2030; it is expected to grow at a CAGR of 2.0% from 2024 to 2030.
