A motor control center (MCC) is an assembly to control some or all electric motors in a central location. It consists of multiple enclosed sections having a common power bus and with each section containing a combination starter, which in turn consists of motor starter, fuses or circuit breaker, and power disconnect. A motor control center can also include push buttons, indicator lights, variable-frequency drives, programmable logic controllers, and metering equipment.

Use of open networks, distributed I/Os, and electronic components is one way of defining an MCC as intelligent. Typically, intelligent systems have three things in common: Control is achieved through a microprocessor-based system. Network technology is used to replace hardwiring. Some degree of enhanced diagnostic or protective functionality is included.
