Abstracts

The global Industrial IoT Gateway Devices market size is predicted to grow from US$ 2686 million in 2025 to US$ 5502 million in 2032; it is expected to grow at a CAGR of 11.0% from 2026 to 2032.

Industrial IoT Gateway refers to a ruggedized, intelligent hardware device that acts as a bridge between field-level industrial equipment (e.g., PLCs, sensors, actuators) and higher-level IT systems or cloud platforms. It collects, processes, filters, and transmits data from various industrial protocols (such as Modbus, OPC UA, CAN, PROFINET, EtherCAT) and translates them into formats suitable for cloud computing, remote monitoring, or edge analytics. These gateways are designed to operate in harsh industrial environments, often featuring wide temperature tolerance, dust and moisture resistance, and anti-vibration capabilities.

Industrial IoT Gateways support key functions such as edge computing, real-time analytics, protocol conversion, cybersecurity, device management, and connectivity to 4G/5G, Wi-Fi, Ethernet, or LPWAN networks. They enable legacy industrial machines to participate in modern Industrial Internet of Things (IIoT) ecosystems without requiring a full system upgrade. These gateways are critical components in smart manufacturing, predictive maintenance, remote diagnostics, energy management, and other Industry 4.0 applications.

In 2020, the Industrial/Commercial IoT Gateway, which has the largest sales market share among global IoT gateway devices by type, is about 58.71%. In 2020, building automation has the largest market share of global IoT gateway devices by application field, which is about 36.39%.
