Laser protective glasses are professional protective equipment used to prevent damage to the eyes from laser radiation. Their core principle is to significantly reduce the energy transmittance of the corresponding laser wavelength through absorption or reflection filters of specific wavelengths, while maintaining a certain level of visible light transmittance for normal operation. Laser protective glasses are typically designed and selected according to laser wavelength (such as 1064 nm, 532 nm, 10.6 μ m, etc.) and optical density class (OD value). They are widely used in laser cutting, welding, marking, medical lasers, scientific research experiments, and teaching scenarios, and are one of the most basic and critical personal protective equipment in the laser operation safety system. In 2025, sales reached 2.47 million units, with an average price of \$124, total production capacity of 2.7 million units, and a gross profit margin of 45%.

United States market for Industrial Laser Protective Glasses is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
