## Abstracts

The global Industrial Methylnaphthalene market size is predicted to grow from US\$ 8.61 million in 2025 to US\$ 11.38 million in 2032; it is expected to grow at a CAGR of 4.1% from 2026 to 2032.

Industrial methylnaphthalene is a naphthalene-based compound, mainly composed of two isomers: 1-methylnaphthalene and 2-methylnaphthalene. It usually exists as a mixture, has an aromatic smell, and is widely used in chemicals, dyes and other industrial fields.

The market for industrial methylnaphthalene is driven by its widespread use as an intermediate in the production of dyes, agrochemicals, resins, and heat-resistant materials. Sourced mainly from coal tar and petroleum byproducts, methylnaphthalene is valued for its aromatic properties and reactivity in chemical synthesis. Its application in fuel research?as a reference compound for cetane number determination?further supports demand in the energy and automotive sectors. Additionally, the expanding chemical manufacturing base in emerging economies and the increasing demand for high-performance industrial materials are boosting market growth. However, environmental regulations concerning volatile organic compounds (VOCs) and polycyclic aromatic hydrocarbons (PAHs) may impact future production and encourage the development of cleaner, more sustainable alternatives.
