## Abstracts

The global Industrial Minerals market size is predicted to grow from US\$ 218160 million in 2025 to US\$ 271150 million in 2032; it is expected to grow at a CAGR of 3.2% from 2026 to 2032.

Industrial minerals are naturally occurring, non-metallic minerals that are used in various industrial applications due to their physical and chemical properties. Unlike metals, industrial minerals are valued for their inherent properties rather than their metal content. These minerals play a crucial role in numerous industries, including construction, manufacturing, agriculture, and technology.

Key Industrial Minerals:

**Limestone:** Used in construction, agriculture, and manufacturing. It is a key component in the production of cement, lime, and crushed stone.

**Kaolin:** Used in the production of ceramics, paper, paint, rubber, and various other products.

**Silica (Sand):** Essential in the production of glass, casting metals, and as a key component in the manufacturing of silicon wafers for the electronics industry.

**Potash:** An important fertilizer component used in agriculture to enhance plant growth.

**Talc:** Used in the production of talcum powder, ceramics, plastics, and paint.

**Gypsum:** Used in construction materials such as drywall and plaster, as well as in agriculture as a soil conditioner.
