Industrial oil suction filter is a kind of filtering equipment specially designed to remove grease and oil impurities from liquid. It is usually installed on the suction line of the oil pump to protect the oil pump and other hydraulic components and avoid the inhalation of pollutants, thereby effectively controlling the pollution of the hydraulic system and improving the cleanliness and stability of the hydraulic system. The working principle of this filter is similar to that of a water absorber, and grease and oil impurities in the liquid are removed through the adsorption of the filter element.
