As a potential flashpoint in the field of industrial digitalization, the importance of predictive maintenance to the engineering industry is beyond doubt. Therefore, most companies have put it on the agenda. Although in this field, technology-driven innovation concepts are gradually being valued by machinery and parts manufacturers, in many cases, other main success factors (such as a precise understanding of user needs, a proper combination of business models and needs ) has not received the systematic thinking it deserves.

But the importance of predictive maintenance to the manufacturing industry has been fully recognized and widely accepted. Predictive maintenance is key to ensuring efficient, sustainable service into the future. It shows that predictive maintenance is not just a service, but also a development opportunity and an indispensable success factor for future business.

As intelligent manufacturing has become one of the main driving forces in the manufacturing industry, the scale of the industrial Internet industry continues to expand, the industrial Internet expands, and the level of intelligent manufacturing continues to

improve, so we believe that the scale of the industrial predictive maintenance market will maintain an upward trend.
