Industrial process water cooling system is a heat management device widely used in industrial production processes. It is mainly used to remove excess heat generated during equipment operation through a circulating water system to ensure that process equipment operates efficiently within a stable and reasonable temperature range. Industrial water cooling systems can be divided into open and closed loop types according to the cooling method, and can be divided into pure water systems, ethylene glycol mixed liquid systems, etc. according to the medium. Compared with air cooling systems, water cooling has higher heat conduction efficiency and better temperature control stability, and is especially suitable for industrial scenarios with strong continuity and high heat generation.

United States market for Industrial Process Water Cooling System is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
