Industrial refrigeration reciprocating compressor is a mechanical device that compresses refrigerants (such as ammonia and Freon) through the reciprocating motion of the piston, providing a low-temperature environment for cold storage, food processing, chemical industry and other industrial fields. Its core components include cylinders, pistons, crankshafts and valve systems. It has the characteristics of high pressure ratio (adapting to -40° to 10° working conditions), strong durability (24/7 continuous operation) and modular maintenance, but it has high vibration and noise. According to the working fluid, it can be divided into ammonia compressors and Freon compressors, which are suitable for medium and large refrigeration systems (cooling capacity range 20-500kW).

United States market for Industrial Refrigeration Reciprocating Compressors is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
