Industrial Residual Current Detectors (RCDs) are robust safety devices used in industrial settings to prevent electrical hazards, such as electric shock and equipment damage, caused by electrical faults. These detectors continuously monitor the electrical current in industrial circuits and instantly disconnect the power supply if they detect leakage currents or imbalances. Designed to handle higher loads and more complex electrical systems, industrial RCDs provide critical protection for workers and machinery in factories, warehouses, and other industrial environments. Their reliable performance helps maintain operational safety and compliance with electrical safety standards.

The global Industrial Residual Current Detectors market size is projected to grow from US\$ 1539 million in 2024 to US\$ 1978 million in 2030; it is expected to grow at a CAGR of 4.3% from 2024 to 2030.
