Remote routers are used to connect remote networks. The remote routers usually support multiple protocols and multiple interfaces in order to connect to the wide area network, such as connecting ISDN, X.25, and DDN networks. The remote router can be set to filter incoming and outgoing data packets, so that the network administrator can control the network load and determine which network nodes can access a given network.

Global industrial router for remote access key players include Red Lion Controls, Westermo, Ewon (HMS Networks), Phoenix Contact, KEB Automation, etc. Global top 5 manufacturers hold a share over 75%. North America is the largest market, with a share about 45%, followed by Europe and China, has a both share about 40 percent.

Market Driver:

Internet traffic has skyrocketed. From consumption to industry, from the connection of people to the interconnection of things and things to the interaction between people and things, the number of connected devices will explode, driven by the explosive growth of mobile data and the number of connected devices. The high-end router market with

large throughput and large number of ports ushered in an incremental stage.

The rapid development of industry drives the growth of this field.

Market Challenge:

Cybersecurity Threats: Despite the enhanced security features of industrial routers, the increasing sophistication of cyber - attacks poses a significant threat. Breaches in security can lead to the loss of sensitive industrial data and disruptions in industrial operations.

High Initial Costs: The purchase and installation costs of industrial routers for remote access, especially those with advanced features, can be high. This can be a barrier for small and medium - sized enterprises with limited budgets.

Complexity of Integration: Integrating industrial routers into existing industrial systems can be complex, requiring specialized knowledge and expertise. This may lead to additional costs and delays in implementation.
