The global Industrial-Scale AEM Electrolyser market size is predicted to grow from US\$ 16430 million in 2025 to US\$ 84980 million in 2032; it is expected to grow at a CAGR of 27.0% from 2026 to 2032.

Industrial-scale AEM (Anion Exchange Membrane) electrolyser is a large-capacity system designed for efficient hydrogen production in various industrial applications. It employs an anion exchange membrane that facilitates hydroxide ion conduction, enhancing energy efficiency and reducing operational costs compared to traditional methods. These electrolysers utilize non-precious metal catalysts, lowering material expenses and promoting sustainability, while effectively integrating with renewable energy sources for green hydrogen production. Their modular design allows for scalability based on production needs, and they are robustly constructed to withstand industrial conditions, making them suitable for sectors like energy, chemical manufacturing, and decarbonization efforts.

Industrial-scale Anion Exchange Membrane (AEM) electrolysers are emerging as a promising solution for low-cost green hydrogen production, combining the efficiency benefits of PEM systems with the lower material costs of alkaline electrolysers. As industries transition to decarbonization, AEM technology is gaining traction in applications such as renewable energy storage, ammonia synthesis, and steelmaking. Europe, China, and the United States are currently the largest potential markets, driven by hydrogen roadmaps and policy incentives.
