The global Industrial Sodium Cyanide market size is predicted to grow from US\$ 2790 million in 2025 to US\$ 3954 million in 2032; it is expected to grow at a CAGR of 4.8% from 2026 to 2032.

In 2025, global industrial sodium cyanide production reached approximately 1.15 million tons, with an average unit price of about USD 2,472 per ton.

Industrial Sodium Cyanide is a highly toxic inorganic compound (NaCN) produced primarily for large-scale industrial applications, typically as a white crystalline solid or concentrated aqueous solution. Its production relies on upstream raw materials such as hydrogen cyanide (HCN), caustic soda (sodium hydroxide), and ammonia or natural gas as key feedstocks. Industrial sodium cyanide is primarily consumed downstream by the mining industry for gold and silver recovery, as well as in chemical synthesis and metal surface treatment. Due to its extreme toxicity, strict safety and environmental controls are required throughout production, storage, transportation, and use.

The industrial sodium cyanide market is largely driven by the mining industry, as it remains the primary reagent for gold and silver recovery. In addition to mining, industrial sodium cyanide is applied in chemical manufacturing and metal surface treatment. The market is evolving with an increased focus on safety, regulatory compliance, and efficient production techniques. Demand is shifting toward liquid forms and on-site preparation to minimize handling and transportation risks. Technological advancements in automation, remote monitoring, and predictive maintenance are further enhancing operational safety and efficiency. Overall, the market is steadily expanding, with opportunities for suppliers offering high-purity products, reliable delivery, and environmentally responsible solutions.
