The global Industrial Switch Mode Power Supply (SMPS) market size is predicted to grow from US\$ 26420 million in 2025 to US\$ 36150 million in 2032; it is expected to grow at a CAGR of 4.7% from 2026 to 2032.

A switch-mode power supply, also known as a switching power supply or SMPS, is a non-linear type of electrical supply. It is much smaller and more compact than linear power supplies for a given output.

Switch-mode power supplies are used in device and machinery power-supply subsystems. Their compactness has led to decreased device size. However, they generate unwanted electrical noise, making them unsuitable for certain applications. They can be found in most electronic equipment (computers, monitors, measuring devices, etc.).
