The global Industrial Synthetic Retinol market size is predicted to grow from US$ 37.2 million in 2025 to US$ 45 million in 2031; it is expected to grow at a CAGR of 3.2% from 2025 to 2031.

The world market for synthetic retinol is primarily for animal feed, leaving approximately 13% for a combination of food, prescription medication and dietary supplement use. The first industrialized synthesis of retinol was achieved by the company Hoffmann-La Roche in 1947.

Industrial synthetic retinol is a form of vitamin A that is produced through chemical synthesis methods. Retinol is an essential nutrient for the human body, playing crucial roles in maintaining vision, promoting cell growth, and supporting immune functions. Industrial synthetic retinol finds widespread applications in areas such as food, dietary supplements, cosmetics, providing a source of supplemental vitamin A for various products. This synthetic approach allows for large-scale production of retinol, ensuring stability and consistency in its incorporation into different products.
