An industrial traffic light is a specialized signaling device designed for use in industrial settings to manage and regulate the movement of vehicles, equipment, and sometimes personnel. These lights typically feature multiple colored lamps, most commonly red, yellow (or amber), and green, similar to traditional traffic lights used on public roads. The red light indicates a halt or stop, compelling vehicles or machinery to come to a standstill to prevent collisions or dangerous situations. The yellow light serves as a warning, signaling that the current state (such as a go signal) is about to change, prompting operators to prepare to stop or proceed with caution. The green light gives the clear indication to proceed, allowing vehicles or equipment to move forward safely. Industrial traffic lights are built to withstand harsh environmental conditions, including dust, vibrations, and extreme temperatures, often found in factories, warehouses, construction sites, and other industrial facilities. They are usually installed at strategic locations, such as intersections of industrial roadways, entrances and exits of work areas, or near areas where heavy machinery operates, to ensure smooth and safe traffic flow and to enhance overall industrial safety.

United States market for Industrial Traffic Light is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
