Industrial tubular electric heating element is an electrical heating component which uses a metallic tube as its enclosure. Inside the tube, spiral - shaped alloy resistance wires act as the heating elements. These resistance wires are evenly arranged along the central axis of the metal tube. The interstices around the resistance wires are densely packed with magnesium oxide powder, which serves as an insulating and heat - conducting medium. Both ends of the heating wires are equipped with terminal pins or wires for connection. This component is designed to utilize electricity to produce heat, and is mainly used for heating gases, liquids or solid - state metallic substances within industrial production environments ?
