Oil and gas industry leaders have strong ties with needle valve manufacturers and suppliers. In the upstream, valves are used to control the flow of oil and has from high pressure injection systems to blow out preventers and choke valves. In the midstream section, where storage and transportation of oil and gas is conducted from deep sea, valves are used to protect equipment while controlling product flow. As the entire systems are supposed to be kept at low temperatures to convert gas into liquids, companies demand that the valve suppliers and manufacturers specifically product parts that are durable in low temperature conditions. The third segment, downstream brings a lot challenges for the refining process of crude oil. This segment feeds raw materials to the petrochemical industry which is why high pressure valve designs are needed here.
