The global Industrial Waste Briquetting Machine market size is predicted to grow from US\$ 1573 million in 2025 to US\$ 2107 million in 2032; it is expected to grow at a CAGR of 4.1% from 2026 to 2032.

An industrial waste briquetting machine is a device that uses mechanical or hydraulic high pressure to compress powdery or fine-particle waste generated during industrial production (such as metal shavings, steel slag powder, ore tailings powder, chemical by-products, coal powder, sludge, etc.) into blocks or spheres. It typically consists of pressure rollers, a hydraulic system, a transmission system, and molds, enabling direct molding with little or no binder. It solves the problems of low direct utilization rate of industrial waste, difficult transportation, and severe dust pollution, achieving resource reuse, reducing environmental pollution, and improving industrial production efficiency. The average price of this product is approximately US\$140,000 per unit, with global sales of approximately 11,000 units.

The upstream sector includes industrial waste raw materials (mineral powder, metal scraps, chemical byproducts, coal powder, sludge), hydraulic systems, wear-resistant roller molds, controllers, and sensors. The midstream sector comprises briquetting machine manufacturers and system integrators, covering feeding, batching, dust removal, screening, and packaging, with machine power ranging from 55 to 400 kW, covering different production capacity segments. The downstream sector consists of steel metallurgy, mining, chemical building materials, energy, and environmental protection companies, whose procurement needs are concentrated on unit capacity (2.2–50 t/h), molding strength, and synergy in dust control. Future trends are towards low carbon and resource utilization, with the market favoring high-pressure compaction, automated production lines, and cost visibility. Equipment prices are influenced by

machine size, roller material, and hydraulic system specifications. Procurement references and cost breakdowns will become a focus of industry attention in 2025.

United States market for Industrial Waste Briquetting Machine is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
