Industrial water tube boiler is a type of boiler in which water circulates in tubes heated externally by fire. Fuel is burned inside the furnace, creating hot gas which boils water in the steam-generating tubes. In smaller boilers, additional generating tubes are separate in the furnace, while larger utility boilers rely on the water-filled tubes that make up the walls of the furnace to generate steam.

The global Industrial Water Tube Boilers market size is projected to grow from US\$ 4320 million in 2024 to US\$ 5876 million in 2030; it is expected to grow at a CAGR of 5.3% from 2024 to 2030.
