An industrial weighing loss-in-weight feeder is a precise bulk material handling device that continuously dispenses powders, granules, or pellets at a controlled rate by measuring the decreasing weight of the material in the hopper over time. The system uses load cells to monitor the weight loss and a feedback control mechanism to adjust the feed rate via screw conveyors, vibratory feeders, or belt feeders. Commonly used in chemical, food, pharmaceutical, and plastics industries, loss-in-weight feeders ensure accurate dosing, maintain consistent process flow, minimize material waste, and support automated production lines with high reliability and precision.

In 2024, global industrial weighing loss-in-weight feeder production reached approximately 71.07 k units, with an average global market price of around US\$ 5895 per unit. And global industrial weighing loss-in-weight feeder production capacity reached approximately 85 k units. The average gross margin in this industry reached 23.82%.
