According to this study, the global Industrial WLAN market size will reach US$ 8726 million by 2031.

Industrial WLAN is a wireless communication technology designed specifically for industrial environments. It can provide highly reliable, low-latency network connections under harsh conditions such as high temperature, vibration, and electromagnetic interference. It supports factory automation, remote monitoring, AGV scheduling and other scenarios through industrial-grade wireless access points (APs), routers and terminal devices, and is compatible with industrial protocols such as PROFINET and EtherNet/IP to ensure real-time data transmission between devices. Compared with commercial WiFi, it has IP67 protection, wide temperature tolerance (-40°C to 75°C) and redundant design. It is widely used in manufacturing, energy, transportation, mining and other fields. It is the core infrastructure of Industrial Internet of Things (IIoT) and smart manufacturing.

The Industrial WLAN market has grown rapidly in recent years, mainly driven by the demand for Industry 4.0, smart manufacturing and the Internet of Things (IIoT). North America and Europe dominate due to the high degree of automation in the manufacturing industry, while the Asia-Pacific region (especially China and India) has become the fastest growing region due to smart factories and infrastructure upgrades. International manufacturers such as Siemens, Cisco, and Hirschmann occupy the high-end market with their technological accumulation, while domestic companies (Huawei and Ruijie) seize the mid- and low-end market share through cost-effective solutions. In the future, the integration of 5G and WiFi 6/7, TSN (time-sensitive networking) and edge computing will drive the market to upgrade to high reliability and low latency, but industry fragmentation standards and network security risks remain the main
