X-ray computed tomography (XCT) system produces a three-dimensional (3-D) computer model of the imaged volume of a sample. Contrast between different components is based on how strongly they absorb X-rays, which is typically a function of elemental composition and density. The technique is generally non-destructive and reveals the internal architecture of specimens, including pores, inclusions, and other internal features. X-ray Computed Tomography (CT) provides a significant improvement in its ability to detect small defects, compared to traditional radiography, hence its growing use in industrial applications. Some of the key uses of industrial X-ray CT scanning are defect detection, fault analysis, metrology, assembly analysis and reverse engineering applications.

The global Industrial X-Ray CT System market size is projected to grow from US\$ 568 million in 2024 to US\$ 722 million in 2030; it is expected to grow at a CAGR of 4.1% from 2024 to 2030.
