The global Indwelling Peripheral Intravenous Catheter market size is predicted to grow from US\$ 992 million in 2025 to US\$ 1628 million in 2031; it is expected to grow at a CAGR of 8.6% from 2025 to 2031.

The peripheral intravenous catheter (PIVC) is a small flexible tube. This is inserted into a peripheral vein for the delivery of medicines and nutritional supplements. It is widely used in the collection of blood samples for diagnostic purpose. The peripheral intravenous catheters can be divided into two types: short peripheral intravenous catheters (PIVCs) and integrated/closed catheters (PIVCs). The peripheral intravenous catheter is usually inserted into the lower part of the arm or the back of the hand. Peripheral intravenous (IV) lines, catheters or cannulas are indwelling single-lumen plastic conduits that allow fluids, medications and other therapies such as blood products to be introduced directly into a peripheral vein.

The life science research and related industries in developed countries in Europe and America have a development history of over 100 years, so the main market demand for disposable plastic consumables in global biological laboratories is mainly in Europe and America. In the Asia Pacific region, especially countries represented by China, India, and Singapore, with the continuous growth of new investment in the biotechnology industry, the market for disposable plastic consumables in biological laboratories is growing rapidly and has enormous potential. From the perspective of market supply, internationally renowned comprehensive service providers of biological laboratory supplies are mainly concentrated in developed countries in Europe and America such as the United States and Germany. Multinational companies represented by Corning,

Thermo Fisher, VWR, GE Healthcare, Merck KGaA, Sarstedt, and Eppendorf have long dominated the global supply of disposable plastic consumables for biological laboratories with their strong R&D and brand advantages.
