Inert pump oil is a specially refined or synthesized lubricant with the characteristics of chemical inertness, low vapor pressure, and high oxidation resistance. It is specially used in high vacuum systems (such as diffusion pumps, molecular pumps) and precision instruments. Its main components include perfluoropolyether (PFPE), polyphenylene ether (PPE) or synthetic hydrocarbon (SHC). It can remain stable in extreme temperatures (-80?~300?) and strong radiation environments, and avoid reactions with active gases (such as oxygen and halogens). Inert pump oil can significantly extend the life of equipment and reduce pollution. It is widely used in high-end fields such as semiconductor manufacturing, aerospace technology, and nuclear industry.

United States market for Inert Pump Oil is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
