Inert Specialty Gases are non-reactive gases used in industrial and scientific applications requiring stable atmospheric conditions. Key examples include argon, helium, neon, and krypton, which resist chemical reactions due to their complete valence electron shells. These gases are purified to high grades (99.999% or higher) to eliminate contaminants that could interfere with processes. Applications span semiconductor manufacturing (as etching or deposition agents), welding shielding, analytical instrumentation, and aerospace propulsion systems. Their inertness ensures safety in preventing combustion or oxidation in sensitive environments. Production involves cryogenic distillation, membrane separation, or adsorption technologies, with stringent quality controls to meet industry-specific standards like SEMI or ISO certifications.

United States market for Inert Specialty Gas is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
