An inertial attitude sensor is a sensor used to measure the attitude, direction and motion state of an object. It detects the acceleration, angular velocity and magnetic field information of the object and uses the principle of inertia to accurately determine the object's tilt angle, rotation direction and motion trajectory. These sensors are widely used in aerospace, automotive industry, robotics, consumer electronics and other fields, providing key data support for applications such as navigation, attitude control, and motion tracking.

As an important part of modern science and technology, inertial attitude sensors provide key attitude and motion information for various application scenarios. Their high precision, fast response and stability make them one of the indispensable core technologies in aerospace, automotive industry, robotics and other fields. With the continuous advancement of science and technology and the continuous expansion of application scenarios, inertial attitude sensors will continue to play an important role and promote innovation and development in all walks of life.
