According to our LPI (LP Information) latest study, the global Information-Centric Endpoint and Mobile Protection market size was valued at US\$ million in 2023. With growing demand in downstream market, the Information-Centric Endpoint and Mobile Protection is forecast to a readjusted size of US\$ million by 2030 with a CAGR of % during review period.

The research report highlights the growth potential of the global Information-Centric Endpoint and Mobile Protection market. Information-Centric Endpoint and Mobile Protection are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Information-Centric Endpoint and Mobile Protection. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Information-Centric Endpoint and Mobile Protection market.

Information-centric security products focus on content, more than device, and apply encryption and authentication to block file access and movement from unauthorized people or circumstances. Endpoint systems are porous, mistakenly sharing data is easy, and users can be careless. Information-centric security is the last line of defense for data when firewalls, anti-malware tools, best practices and other traditional defenses fail. The scope of this market is the protection of stored information, commonly referred to as data at rest. The protection of data at rest in some ways takes precedence,

because the interconnectedness of today's systems often undermines network protections. In other words, high-value information should be protected "at rest" to prevent the risk of a breach caused by an unexpected data in motion event.
