Infrared Body Thermometer is a medical device used for non-contact temperature measurement. It operates based on the principle that all objects emit infrared radiation, and this radiation varies with temperature. In the case of an infrared body thermometer, it is primarily used to measure human body temperature. This type of thermometer is designed to be held near the forehead or another part of the body, and it measures the infrared radiation emitted by the body to provide a temperature reading without physical contact.

The Infrared Body Thermometer market primarily serves the healthcare and medical industry, including hospitals, clinics, and individual consumers. The market has seen significant growth, especially during health crises like the COVID-19 pandemic, where non-contact temperature measurement became crucial for identifying potential cases of illness.
