The global Infrared Irradiation Device market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

An infrared irradiation device is a device used to irradiate an object or human body with infrared light.

Infrared light is a type of light that is invisible to the eye, has a longer wavelength than visible light, and is detected as heat energy. The device is used in a non-contact manner, so there is no need to touch the object or subject directly.

This makes it possible to measure and inspect objects and the human body in a non-invasive manner. It also allows measurements and inspections to be performed in a short period. Since infrared rays propagate at the speed of light, data can be acquired in real time.

United States market for Infrared Irradiation Device is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Infrared Irradiation Device is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
