The global Infrared Reflow Oven market size is predicted to grow from US\$ 447 million in 2025 to US\$ 699 million in 2032; it is expected to grow at a CAGR of 6.7% from 2026 to 2032.

An Infrared Reflow Oven is a specialized industrial oven used primarily in the electronics manufacturing process to solder surface mount components onto printed circuit boards (PCBs). It uses infrared radiation as the heat source to melt solder paste, ensuring strong electrical and mechanical connections. Infrared reflow ovens provide precise temperature control and uniform heating, suitable for small to medium production volumes.

The infrared reflow oven market is growing steadily driven by increasing demand for miniaturized and high-density electronic devices, such as smartphones, wearables, and IoT devices. Infrared ovens are valued for their efficient heat transfer and precise control, especially in applications requiring gentle heating to avoid component damage. Advances in automation, integration with Industry 4.0 systems, and energy efficiency improvements are also enhancing product appeal. However, competition from convection and vapor phase reflow ovens is significant, pushing infrared oven manufacturers to innovate.
