The global Infrared Security Lens market size is predicted to grow from US\$ 2029 million in 2025 to US\$ 2871 million in 2032; it is expected to grow at a CAGR of 5.1% from 2026 to 2032.

Infrared Security Lens is an optical lens used in security and surveillance cameras that is optimized for both visible and infrared light transmission, enabling stable image focus and clear night-vision performance in CCTV, IP cameras, smart surveillance systems, traffic monitoring, perimeter security, and industrial security applications.

In 2025, global Infrared Security Lens sales volume reached approximately 345 million units, with an average price of approximately US\$ 6 per unit

1. Infrared Security Lens demand is rising as 24-hour and night-vision surveillance becomes a standard requirement. Outdoor CCTV, IP cameras, traffic cameras, warehouses, parking lots, industrial sites, and perimeter security systems increasingly require clear imaging in both daytime and low-light/nighttime conditions. Day/night cameras use visible light in the day and infrared light at night to produce grayscale images, so lenses must maintain focus when the camera switches between visible and IR imaging. This supports wider use of IR-corrected lenses rather than ordinary visible-light lenses.

2. Higher-resolution security cameras are pushing IR lenses toward megapixel, 4K, low-distortion, and better day/night optical performance. Modern surveillance systems increasingly use HD, 4MP, 8MP/4K and AI-enabled cameras, which require lenses with higher sharpness, better edge clarity, lower distortion, better coating, and stronger IR transmission. Axis, for example, states that its CS lenses support megapixel resolution

and IR correction for day/night cameras, showing that IR correction is now being combined with high-resolution optical requirements.

3. Product differentiation is moving toward varifocal, motorized zoom, and application-specific IR lenses. Basic fixed IR lenses remain widely used in home and small commercial cameras, but higher-value demand is shifting toward varifocal IR lenses, motorized zoom IR lenses, telephoto IR lenses, and wide-angle IR lenses for smart city, traffic, industrial, border, airport, and perimeter security. Remote zoom/focus and iris control are becoming more important because installers want flexible field-of-view adjustment without repeated manual focusing, especially when cameras switch between day and night mode.
