An infrared sensor is an electronic instrument which is used to sense certain characteristics of its surroundings by either emitting and/or detecting infrared radiation. Infrared sensors are also capable of measuring the heat being emitted by an object and detecting motion.

Infrared waves are not visible to the human eye. In the electromagnetic spectrum, infrared radiation can be found between the visible and microwave regions. The infrared waves typically have wavelengths between 0.75 and 1000 μ m. The wavelength region which ranges from 0.75 to 3 μ m is known as the near infrared regions. The region between 3 and 6 μ m is known as the mid-infrared and infrared radiation which has a wavelength greater higher than 6 μ m is known as far infrared.
