Infrared (IR) spectroscopy is a technique used for structure elucidation, detecting and quantifying elements or molecules in any sample which may be solid, liquid, or gas. IR spectroscopy exploits the fact that different elements and molecules absorb frequencies characteristic of their structure. The infrared spectrum is a graph of infrared light absorbance (or transmittance) on the vertical axis vs. frequency or wavelength on the horizontal axis and is then used to detect, quantify and study different samples

IR spectroscopy has become an indispensable technique in numerous industries such as pharmaceutical, biotechnology, food, chemical etc. for quality control and raw material testing.
