The global Infrared Tracking and Identification System market size is predicted to grow from US\$ 11150 million in 2025 to US\$ 17290 million in 2032; it is expected to grow at a CAGR of 6.6% from 2026 to 2032.

The infrared tracking and identification system has the characteristics of high resolution, strong anti-interference ability, high concealment, and high cost-effectiveness. It is widely used in fields such as battlefield early warning, fire control, and detection guidance.

The infrared thermal imaging camera detects the infrared radiation of the target object, and then converts the temperature distribution image of the target object into a video image through photoelectric conversion, electrical signal processing and digital image processing. Infrared thermal imaging cameras were first used in the military field. Its most important applications are day and night observation and thermal target detection. The national defense industry requires infrared thermal imaging camera products from individual soldiers, land weapons, flying weapons and naval ships. Global military infrared thermal imaging Instrument maintains steady growth.
