Abstracts

The global Inhalation Liquid Preparations market size is predicted to grow from US$ 12960 million in 2025 to US$ 18230 million in 2032; it is expected to grow at a CAGR of 5.1% from 2026 to 2032.

Inhalation liquid preparations are drug formulations delivered directly to the respiratory tract and lungs in the form of solutions or suspensions through nebulizers or metered-dose devices. This route ensures rapid onset of action and minimizes systemic side effects, making it widely used for the treatment of asthma, chronic obstructive pulmonary disease (COPD), cystic fibrosis, and respiratory infections. The upstream supply chain mainly includes active pharmaceutical ingredients (APIs) such as budesonide, acetylcysteine, terbutaline sulfate, and ipratropium bromide, along with pharmaceutical excipients like sterile water for injection, buffering salts, and stabilizers. Major API suppliers are concentrated in Europe and India, while high-quality excipients are provided by internationally recognized excipient manufacturers.

On the downstream side, the primary customers of inhalation liquid preparations include hospital respiratory departments, specialized asthma and COPD clinics, retail pharmacies, and homecare patients. With the rising prevalence of respiratory diseases and an aging population, market demand continues to grow. Nebulized inhalation also shows strong advantages in pediatric treatment due to its ease of use and better patient compliance, making it a key option in clinical prescriptions. Both global pharmaceutical giants and regional generic drug manufacturers are actively expanding in this sector to meet the growing market needs.

In 2024, the global market average price for inhalation liquid preparations was approximately USD 2.6 per unit, with a total sales volume of 4.86 billion units.
